

Library Management : RS-LIBMAN

About RS-LIBMAN:

RS-LIBMAN is a robust window based **Library Management** software which satisfies the complete need of the librarian. It facilitates the close monitoring of books, CD / VCD's, magazines, journals, vendors, departments, etc. as the updating process is ONLINE. So as soon as a book is issued, returned, freshly taken into stocks, etc. the system updates the data immediately. Paper work is drastically reduced as complete monitoring is done through the computer. There is no necessity of issue slips/issue cards, library cards or book cards. It is vastly time saving as the time required to track and retrieve a book from a shelf is reduced even when the book is not kept at its right place. Errors due to manual entry into a computer is reduced/obliterated. Frequent stock-taking can be carried out more systematically. Vis-a-vis manual checking can be done which saves the valuable time of the Librarians. **It generate reminders for late/missed deliveries, expiry of membership, overdue books, etc.** Providing the members with an extremely powerful **OPAC (Online Public Access Control)**. Hence it is suitable for small & big libraries, and also for multi locational Libraries.

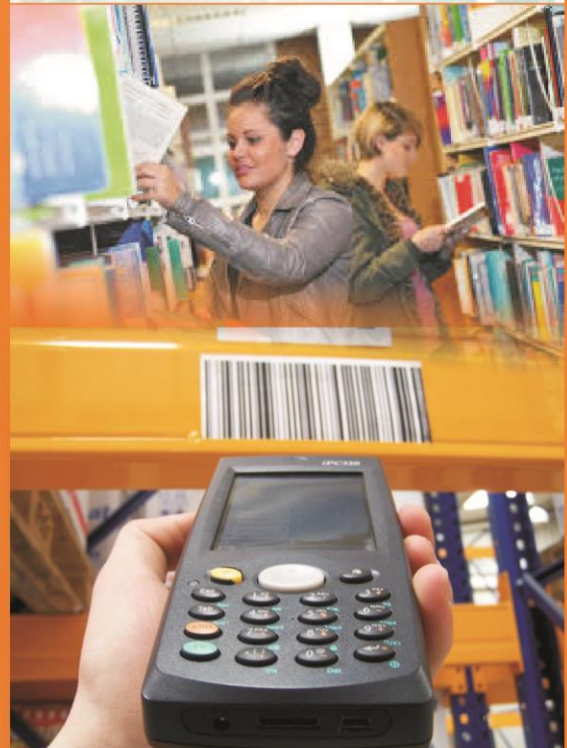

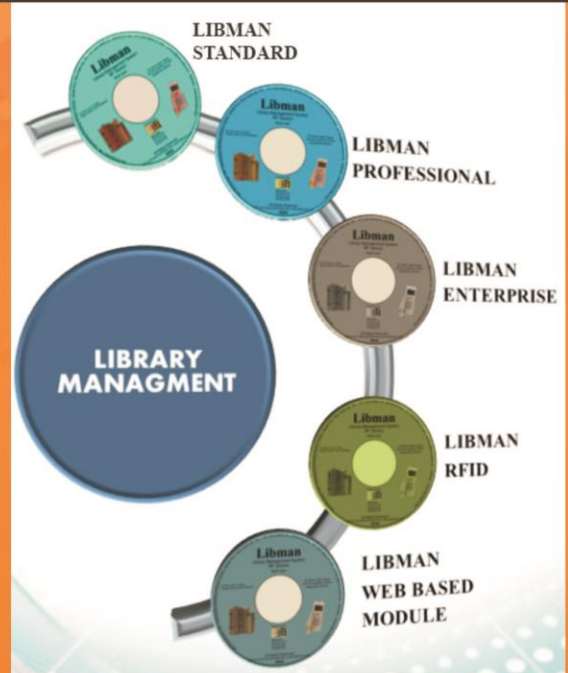

Note: We also take up complete Job Work of - data entry from accession register, label printing, label sticking & stock taking.
